

**Project Design Phase-II**  
**Solution Requirements (Functional & Non-functional)**

Date	27th Jan 2026
Team ID	LTVIP2026TMIDS28540
Project Name	LearnHub
Maximum Marks	4 Marks

**Functional Requirements:**

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The app should have an intuitive and user-friendly interface, ensuring smooth navigation and accessibility for users of all demographics.
NFR-2	Security	User authentication and data must be secured using encryption (e.g., HTTPS, OAuth for third-party logins). The app should prevent unauthorized access and follow best security practices.

<b>NFR-3</b>	<b>Reliability</b>	The app should ensure a consistent and uninterrupted music streaming experience, minimizing crashes and downtime.
--------------	--------------------	---

Following are the functional requirements of the proposed solution.

<b>FR No.</b>	<b>Functional Requirement (Epic)</b>	<b>Sub Requirement (Story / Sub-Task)</b>
FR-1	Educators create courses	Create chapters, add pages in chapters, upload videos
FR-2	Learners enroll in courses	Students enroll in course, complete chapters, track progress
FR-3	Certificate generation	Certificate gets generated upon course completion
FR-4		

#### **Non-functional Requirements:**

Following are the non-functional requirements of the proposed solution.

<b>NFR-4</b>	<b>Performance</b>	Courses should load and stream with minimal buffering. The app should respond to user interactions (search, playback, course management) within 2 seconds.
<b>NFR-5</b>	<b>Availability</b>	The system should maintain an uptime of at least 99.9%, ensuring accessibility across different time zones.
<b>NFR-6</b>	<b>Scalability</b>	The application should handle increasing numbers of users and concurrent streams efficiently without performance degradation. The architecture should support future feature expansion.
